Pack unit in original carton.

The humidifier uses ultrasonic atomizing sheet vibration to break up the liquid water into water mist. The water tank is only a transitional water storage tool. All the humidifier base sinks will have water accumulation. Please feel free to use it.

TROUBLESHOOTING

Place the humidifier at least 2 meters away from any furniture or electrical appliances to avoid d amp contact.

Problem

Easy solution

filthe light is not present or there's no wind or fog

- Check that the power plug is securely inserted into the socket.
- Plug into another socket.
- If necessary reset the circuit breaker.

filthe light is present but there's no wind or fog

- Check whether the base level is too high.
- Pour some water inside the base and tighten the lid.

Spray less

- Check whether there's too much nebulizer or eventual water impurities.
- Clean the nebulization film, replace with clean water.

Abnormal noise

- Check if the water tank isn't filled with too much water or that the surface of water is unstable.
- In case that the surface is unstable, add water in the tank and make sure the humidifier is placed on a smooth surface.

The water can not reach the base

- Check whether the water tank cover is eventually unclean or the water tank is not placed properly.
- Clean the water tank cover and make sure that the tank is set properly.

Leaks

- Check whether the machine is correctly leveled.
- Check whether the water tank and the base are completely corresponding.
- During the process of carrying the water tank, please do not touch the water tank cover in order to avoid water leakage.
