2 built-in lithium batteries with a capacity of 2200 mAh

This product contains batteries that should not be exposed to extreme temperatures. Do not attempt to modify or disassemble the product.

User manual and safety information

1. This product is a multifunctional work lamp equipped with 2 built-in lithium-ion batteries that can be charged using a Type C charging cable (the charging cable is included, the power adapter is not included).

2. Before use, please check the product thoroughly.

3. Press the switch to turn the light on/off and select lighting modes.

4. The maximum input and output voltage and current are 5 V DC/1 A; please choose the appropriate power supply and charge external devices with the same parameters.

5. The handle can be rotated 180 degrees.

6. To keep the battery in good condition, do not allow it to fully discharge or overcharge.

7. The light source in this fixture is not replaceable; when the light source reaches the end of its lifespan, the entire fixture must be replaced.

8. Avoid using and charging in environments with temperatures above 40°C.

9. If the device will not be used for an extended period, it should be fully charged first. It should be charged at least once every 3 months. If the device has not been charged for more than 12 months, it should be discontinued to avoid safety hazards.

10. For your own safety during charging with a power adapter, please follow these rules: Only use power adapters that have obtained CE/PSE/UL/ETL safety certifications and have specified output voltage and current. Do not continue charging after the 100% charge information is displayed.

*This product is subject to the provisions of European Directive 2012/19/EU. The symbol of a crossed-out waste bin indicates that the product requires selective waste collection in the European Union. This applies to the product and all accessories marked with this symbol. Products marked with this symbol must not be disposed of with normal municipal waste but should be delivered to a collection point for recycling electrical and electronic equipment. This recycling symbol indicates, for example, an item or material parts as valuable for recycling. Recycling helps reduce the consumption of raw materials and protect the environment.

Battery information:
Type: Portable lithium-ion batteries (Li-Ion)
Net weight: 0.0852kg
Capacity: 2200mAh
Exceeded permissible cadmium content (0.002%) or lead (0.004%): no
Battery serial number: ICR18650

Environmental protection

Waste electrical and electronic equipment marked according to the European Union directive must not be placed together with other municipal waste. It is subject to selective collection and recycling at designated points. By ensuring its proper disposal, you prevent potential negative consequences for the natural environment and human health. The waste collection system complies with locally applicable environmental protection regulations regarding waste disposal. Detailed information on this can be obtained from the municipal office, cleaning facility, or the store where the product was purchased. The product meets the requirements of the so-called New Approach directives of the European Union (EU) regarding issues related to user safety, health protection, and environmental protection, specifying hazards that should be detected and eliminated.

This document is a translation of the original user manual created by the manufacturer.

Detailed information on the distributor/manufacturer warranty conditions is available at <https://serwis.innpro.pl/gwarancja>

The product should be regularly maintained (cleaned) by the user or through specialized service points at the user's cost and responsibility. In the absence of information about necessary periodic maintenance or service actions in the user manual, the physical condition of the product should be assessed regularly, at least once a week, against that of a physically new product. If any deviation is detected or identified, urgent maintenance (cleaning) or service steps should be taken. Failure to properly maintain (clean) and respond upon detection of a deviation may lead to permanent damage to the product. The warranty does not cover damages resulting from neglect.

Safety measures

Before starting to charge, check if the device contacts are clean.

Never leave the device unattended while in use and charging.

Ensure that you can quickly disconnect the device from the power source in an emergency.

Never expose the device to high temperatures.

Charge the device in a dry and well-ventilated place away from flammable materials, maintaining a minimum space of 1m from other objects.

Never cover the device while charging.

Never use a power adapter, charging station, cables, etc., without the manufacturer's recommendation and certification.

Take care of your property; the device is equipped with cells that are difficult to extinguish, equip yourself with a fire blanket.

LI-ION battery

The device is equipped with a LI ION (lithium-ion) battery, which ages over time and usage due to its physical and chemical structure. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal working conditions for the device exist, and the battery itself is new and fully charged. The actual operating time may differ from that declared in the offer and this is not a defect of the device but a feature of the product. To maintain maximum battery life, it is not recommended to discharge it below 3.18V or 15% of the total capacity. Lower values, such as 2.5V for the cell, permanently damage it and this is not covered by the warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and the charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.

LI-PO battery

The device is equipped with a LI PO (lithium-polymer) battery, which ages over time and usage due to its physical and chemical structure. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal working conditions for the device exist, and the battery itself is new and fully charged. The actual operating time may differ from that declared in the offer and this is not a defect of the device but a feature of the product. To maintain maximum battery life, it is not recommended to discharge it below 3.5V or 5% of the total capacity. Lower values, such as 3.2V for the cell, permanently damage it and this is not covered by the warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and the charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.
