
Αλκαλικές μπαταρίες LEPRO 130001-48 AAA R3, συσκευασία των 48 τεμαχίων

LEPRO · EAN 4894495039012

Machine translation from Polski. In case of doubt the manufacturer's original document prevails.

Lepro

Alkaline battery
Mercury and cadmium free

WARNING! IMPORTANT SAFETY INSTRUCTIONS.

1. Ensure that anyone using this battery has read these warnings.
 2. Do not charge the battery. Alkaline batteries are single-use batteries and are not intended for recharging. Attempting to charge these batteries may result in leakage or even explosion.
 3. Do not force discharge the battery.
 4. Lepro/LE and its affiliates are not responsible for any injuries or damages resulting from charging the battery or other improper use.
 5. Do not insert the battery incorrectly. Always insert batteries correctly, paying attention to the polarity (+/-) marked on the battery and the device.
 6. Do not short-circuit the battery.
 7. Do not enclose the battery in a case, do not modify, disassemble, open, drop, crush, damage, puncture, burn, or shred the battery.
 8. Do not open or disassemble the battery.
 9. Do not deform or damage the batteries.
 10. Do not weld or solder directly on the batteries. Soldering batteries is dangerous because the heat can melt the insulator, causing an internal short circuit, which in turn can lead to heat generation, explosion, and fire.
 11. Do not expose the batteries to heat, rain, or water.
 12. Improper use of the battery may increase the risk of fire or chemical burns.
 13. Keep away from open flames, sunlight, or high temperatures, as the battery may ignite, explode, leak, or overheat.
 14. Keep away from high-voltage devices.
 15. Do not burn batteries or expose them to high temperatures.
 16. Do not throw batteries into fire.
 17. Handle damaged or leaking batteries with extreme caution. Damaged batteries may leak and cause bodily injury or equipment damage.
 18. This product is not a toy. Batteries should be kept out of reach of children.
 19. Do not allow children to replace batteries without adult supervision.
 20. Use only in designated equipment. Using batteries in incompatible equipment may increase the risk of fire or explosion. Always select the appropriate size and class of battery, preferably suited to the intended application. Information provided with the equipment to assist in the proper selection of batteries should be retained for reference.
 21. Recycle or dispose of properly.
 22. Never store or use batteries in an unventilated room where excessive internal temperature may occur. Batteries should be stored in well-ventilated, dry, and cool conditions. High temperature or high humidity may cause
 23. Do not mix old and new batteries or batteries of different types or brands. When replacing batteries, replace all at once with new batteries of the same brand and type. Using batteries of different brands or types simultaneously, as well as new and old batteries, may cause some batteries to over-discharge due to differences in voltage or capacity. This may result in gas release, electrolyte leakage, and explosion, which may cause bodily injury.
 24. Exhausted batteries should be removed from the device immediately and disposed of properly. If discharged batteries remain in the device for an extended period, electrolyte leakage may occur, causing damage to the device and bodily injury.
 25. Remove batteries from the device if it will not be used for an extended period, unless it is for emergency purposes. It is recommended to immediately remove batteries from devices that have stopped functioning properly or when a long period of non-use is anticipated (e.g., portable light-up toys). Although most batteries currently available on the market are equipped with protective covers or other safeguards to prevent leakage, a partially or fully discharged battery may be more prone to leakage than an unused battery.
 26. Unused batteries should be stored in their original packaging away from metal objects. If batteries have already been removed from the packaging, do not mix or stack them haphazardly.
 27. Do not mix unpackaged batteries to avoid mechanical damage and mutual short circuits.
 28. Handle batteries with care. Mishandling may cause damage to them. This may lead to leakage, explosion, or fire.
 29. If the battery leaks and its electrolyte comes into contact with skin or clothing, wash the affected area with clean water. If electrolyte from the battery gets into the eye, rinse it immediately with clean water and seek medical attention promptly.
 30. Turn off battery-powered devices when not in use to prevent electrolyte leakage.
 31. Batteries should not be exposed to prolonged direct sunlight or placed in areas where they may become wet from rain. When batteries become wet, their insulation resistance decreases, which may lead to self-discharge and rust formation.
 32. Before installing the battery, clean the battery contacts and the device contacts.
 33. During normal storage, the temperature should be between +10°C and +25°C and should never exceed +30°C. Avoid prolonged exposure to extreme humidity (above 95% relative humidity and below 40% relative humidity), as this adversely affects both the batteries and the packaging. Batteries should not be stored near heaters or boilers, nor in places exposed to direct sunlight.
 34. Do not remove or damage the battery label. Removing or damaging the label increases the risk of battery short circuit and may cause leakage, overheating, or explosion.
 35. The battery should be used before the expiration date recommended on the label.
- Customer service: If you are not fully satisfied with this product - the alkaline battery - please contact our customer service department.

Manufacturer: LE Innovation Limited
One Spencer Dock, North Wall Quay, Dublin 1, D01 X9R7, Ireland

Battery information:
Type: Portable zinc-carbon batteries (ZC)
Net weight: 0.53kg
Capacity: 1250mAh
Exceeded permissible cadmium content (0.002%) or lead (0.004%): no
Battery serial number: LR03

Environmental protection

Waste electrical and electronic equipment marked in accordance with the European Union directive must not be placed together with other municipal waste. It is subject to selective collection and recycling at designated points. By ensuring its proper disposal, you prevent potential negative consequences for the natural environment and human health. The waste collection system complies with locally applicable environmental protection regulations regarding waste disposal. Detailed information on this can be obtained from the municipal office, waste management facility, or the store where the product was purchased. The product meets the requirements of the so-called New Approach directives of the European Union (EU) regarding safety, health protection, and environmental protection, identifying hazards that should be detected and eliminated.
