Product: Smart laser toy for dogs/cats

Model: PTY010

The product complies with the directive of the European Parliament and Council 2014/53/EU
of

April 16, 2014, on the harmonization of the laws of the Member States regarding the making

available on the market of radio equipment and repealing directive 1999/5/EC.

The declaration of conformity is available on the website:

<https://files.innpro.pl/Petoneer>

Radio frequency: 2402~2480 MHz

Max. radio frequency power: 1.2 dBm

This document is a translation of the original user manual,
created by the manufacturer.

The product should be regularly maintained (cleaned) by the user
or by specialized service points at the user's cost and responsibility. In the absence of
information about necessary periodic or service maintenance actions in the user manual, the
user should regularly, at least once a week, assess the deviation of the physical condition of
the product from that of a physically new product. If any deviation is detected or noted,
urgent maintenance (cleaning) or service steps should be taken. Failure to properly maintain
(clean) and respond upon detecting a state of deviation may lead to permanent damage to
the product. The guarantor is not responsible for damages resulting from negligence.

LI-ION Battery

The device is equipped with a LI ION (lithium-ion) battery, which, due to its physical and
chemical structure, ages over time and usage. The manufacturer specifies the maximum
operating time of the device under laboratory conditions, where optimal operating conditions
for the device exist, and the battery itself is new and fully charged. Actual operating time
may

differ from that declared in the offer and this is not a defect of the device but a feature of the
product. To maintain maximum battery life, it is not recommended to discharge it below
3.18V or 15% of total capacity. Lower values, such as 2.5V for the cell, permanently damage
it and this is not covered by warranty. If the battery or the entire device is not used for more
than one month, the battery should be charged to 50% and its charge level should be
checked

periodically every two months. Store the battery and device in a dry place, away from
sunlight
and negative temperatures.

LIPO Battery

The device is equipped with a LI PO (lithium-polymer) battery, which, due to its physical and
chemical structure, ages over time and usage. The manufacturer specifies the maximum
operating time of the device under laboratory conditions, where optimal operating conditions

for the device exist, and the battery itself is new and fully charged. Actual operating time may differ from that declared in the offer and this is not a defect of the device but a feature of the product. To maintain maximum battery life, it is not recommended to discharge it below 3.5V or 5% of total capacity. Lower values, such as 3.2V for the cell, permanently damage it and this is not covered by warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and its charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.
