Puluz PU919B Dual Channel Charger for GoPro Hero 9/10/11/12

User Manual

The Puluz PU919B is a dual-channel charger designed for charging the GoPro AHDBT-901 battery, which is suitable for GoPro Hero 12, Hero 11 Black, Hero 10 Black, and Hero 9 Black cameras. Thanks to its design, with the PU919B you can charge two batteries simultaneously, allowing you to save time for video editing or relaxation. The charger features a battery status indicator, so you will immediately know when it is ready for use. You can use the device with the included USB-C or micro USB cable - both work great at home and on the go.

Easy charging status control

The Puluz PU919B is equipped with a battery status indicator, which means you will always know when the batteries are ready for use. This simple yet useful addition helps avoid unnecessary waiting. The charger has been designed for efficient charging, ensuring that the batteries are fully prepared for the next recording sessions.

Universal and convenient charging options

The Puluz PU919B charger offers flexibility in terms of charging options. You can use the USB-C or micro USB cable - both are included in the package. This means you can use this charger both at home and on the go, utilizing available power sources. It is the perfect solution for those who travel frequently and need an efficient way to keep their batteries ready.

Specification

Model: PU919B

Dimensions: 5.8 x 4.8 x 2cm

Interfaces: Micro USB, USB-C

Input Voltage: Micro USB 5V/2A, USB-C 5V/2A

Output Voltage: 4.4V 800mA

Compatibility: HERO 9/10/11/12

Environmental Protection

Used electronic equipment marked in accordance with the European Union directive must not be disposed of together with other municipal waste. It is subject to selective collection and recycling at designated points. By ensuring its proper disposal, you prevent potential negative consequences for the natural environment and human health. The system for collecting used equipment complies with locally applicable environmental protection regulations regarding waste disposal. Detailed information on this topic can be obtained from the municipal office, waste management facility, or the store where the product was purchased. The product meets the requirements of the so-called New Approach directives of the European Union (EU) concerning issues related to user safety, health protection, and environmental protection, specifying hazards that should be detected and eliminated.

Detailed information about the distributor/manufacturer warranty conditions is available on the website <https://serwis.innpro.pl/gwarancja>

The product should be regularly maintained (cleaned) by the user or through specialized service points at the user's cost and responsibility. In the absence of information about necessary periodic or service maintenance actions in the user manual, the user should regularly, at least once a week, assess any deviation of the product's physical condition from that of a physically new product. If any deviation is detected or identified, immediate maintenance (cleaning) or service actions should be taken. Failure to properly maintain (clean) and respond upon detecting a deviation may lead to permanent damage to the product. The warranty does not cover damages resulting from neglect.

Safety Precautions

Before starting to charge, check that the device contacts are clean. Never leave the device unattended while in use and charging. Ensure that you can quickly disconnect the device from the power source in an emergency. Never expose the device to high temperatures. Charge the device in a dry, well-ventilated area away from flammable materials, maintaining a minimum distance of 1m from other objects. Never cover the device while charging. Never use a power supply, charging station, cables, etc., without the manufacturer's recommendation and certification. Take care of your property; the device is equipped with cells that are difficult to extinguish, so keep a fire blanket handy.

LI-ION Battery

The device is equipped with a LI-ION (lithium-ion) battery, which, due to its physical and chemical structure, ages over time and with use. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal working conditions for the device exist, and the battery itself is new and fully charged. The actual operating time may differ from that declared in the offer and this is not a defect of the device but a characteristic of the product. To maintain maximum battery life, it is not recommended to discharge it below 3.18V or 15% of total capacity. Lower values, such as 2.5V for the cell, permanently damage it and this is not covered by the warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and the charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.

LI-PO Battery

The device is equipped with a LI-PO (lithium-polymer) battery, which, due to its physical and chemical structure, ages over time and with use. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal working conditions for the device exist, and the battery itself is new and fully charged. The actual operating time may differ from that declared in the offer and this is not a defect of the device but a characteristic of the product. To maintain maximum battery life, it is not recommended to discharge it below 3.5V or 5% of total capacity. Lower values, such as 3.2V for the cell, permanently damage it and this is not covered by the warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and the charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.
