Operation instructions

1. Turn on the switch to start the machine, and then adjust the working gear 1-7 (Figure 1).

2. Press the LED light switch to light up the front LED headlamp and press 1st to 3rd gear for the required brightness (Figure 2).

Usage of nail driller

Select the right port for your pet pursuant to the pet bodily form and nail characteristics
Port 1: suitable for small pet nails; Port 2: suitable for large and medium-sized pet nails;
Port 3: (side) suitable for quick nail grinding.

Hold the nail driller in your right hand, turn on the nail driller switch, hold the pet paw in your left hand and gently put your pet's fingernail into the nail grinding hole to start the pet nail repair.

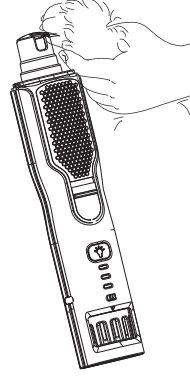

When grinding nails, a slight burnt smell will be produced due to the friction between the high-speed rotating nail driller head and the nail, which is a normal phenomenon. For the safety of pets, continuous nail grinding time should not exceed 5 seconds each time, with attention paid to angle adjustment to polish the pet nails to be smooth.

Usage of nail driller

If the nail driller is used for the first time, it is recommended to polish off the sharp or excessively long part of the nail first and avert excessive grinding to avoid bleeding due to grinding the blood line and make pets get used to the nail driller.

* Please clean the foreign matter on the surface of the nail grinding head when the nail grinding effect decreases during use!

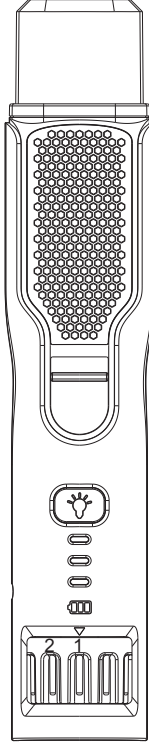

Cleaning method of nail driller head

- ◆ Rotate the protective cover on the head of the nail driller counterclockwise to remove the protective cover
- ◆ Activate the switch to run the nail grinding head
- ◆ Use an eraser or cloth to gently touch the surface of the nail grinding head while it is in operation to remove residual nail powder from the surface
- ◆ Finally, clean any other foreign matter on the nail driller with a napkin or towel
