Bicycle flashlight Superfire BL56-A

User manual

CHARGING INSTRUCTIONS

1. For flashlights and headlamps with USB charging:
 - 1.1. Using a USB cable, connect one end to the USB port of the flashlight and the other end to a USB charger, phone charger, or other USB devices.
 - 1.2. The indicator light glows red while charging or when the battery is low, and changes to a steady blue/green when fully charged.
 - 1.3. Some flashlights can be used as power banks to charge mobile phones or other USB devices.
2. For flashlights with replaceable batteries: Remove the battery from the flashlight and place it in the designated charger. Please pay attention to the battery polarity. Note: Different products may have different configurations and modes, please refer to the actual product.

FLASHLIGHT INSTRUCTIONS

1. Press the button at the end or in the middle of the device to turn the power on/off. Tap to adjust modes, and then press the flashlight power button to switch between different modes, and a long press of 2 seconds in any mode will turn it off.
2. Some flashlights have a beam width adjustment feature - slide the head to adjust the size of the light spot.

HEADLAMP INSTRUCTIONS

Different headlamps have different configurations and modes, please refer to the actual product. Product switch and mode switch

1. Press the light switch to turn on the light, then click to switch between different modes. A long press of 1-2 seconds will turn off the lamp. Some lamps do not support long pressing to turn off.
2. Some switches are designed for additional lights, and a long press of the switch will turn them on.

3. Some lamps have a smooth brightness adjustment mode. Press and hold the button to change the brightness of the lamp from bright to dim or from dim to bright, then release the button to maintain the current brightness.
4. Some lamps are equipped with a motion sensor switch. Press the sensor switch to turn the motion sensor on or off. Wave your hand in front of the lamp to control its brightness.

This document is a translation of the original user manual created by the manufacturer. Detailed information about the distributor/manufacturer warranty conditions is available on the website <https://serwis.innpro.pl/gwarancja>.

The product must be regularly maintained (cleaned) by the user or through specialized service points at the user's cost and responsibility. If there is no information about necessary periodic or service maintenance actions in the user manual, the user should regularly, at least once a week, assess the physical condition of the product against that of a physically new product. If any deviation is detected or identified, urgent maintenance (cleaning) or service steps should be taken. Failure to properly maintain (clean) and respond upon detection of a deviation may lead to permanent damage to the product. The warranty does not cover damages resulting from neglect. All information regarding operation and use can be found in the user manual or on the product label. Before using the product, familiarize yourself with its content and follow the instructions provided. Also, review the following information before use:

Warnings and Safety Information

Electrical safety: Use appropriate batteries: Only use batteries recommended by the flashlight manufacturer to avoid the risk of overheating, explosion, or damage to the device.

Charging batteries: Charge batteries according to the manufacturer's instructions, using the appropriate charger, and never leave the flashlight unattended while charging. Do not use in

damp conditions: If the flashlight is not waterproof, avoid using it in the rain or near water to prevent damage to the electrical circuits and the risk of electric shock. Warning against

overheating: Flashlights, especially those with strong light sources, may heat up during prolonged use. Always check if the device is overheating to avoid burns or material damage.

- Use appropriate batteries: Only use batteries recommended by the flashlight manufacturer to avoid the risk of overheating, explosion, or damage to the device.
- Charging batteries:

Charge batteries according to the manufacturer's instructions, using the appropriate charger, and never leave the flashlight unattended while charging.

- Do not use in damp conditions: If the flashlight is not waterproof, avoid using it in the rain or near water to prevent damage to the electrical circuits and the risk of electric shock.

- **Warning against overheating:** Flashlights, especially those with strong light sources, can become hot during prolonged use. Always check if the device is not overheated to avoid burns or material damage.
- Safety of use:** Using in dark conditions: When using the flashlight in darkness or difficult conditions (e.g., during hiking, camping), pay special attention to the surroundings to avoid tripping or falling.
- Storing the flashlight:** When the flashlight is not in use, store it in a dry and cool place to avoid damage, especially if it is powered by batteries that can overheat.
- Child safety:** The flashlight should be stored out of reach of children, especially if it contains small parts, such as replaceable batteries or removable port covers, which may pose a choking hazard.
- **Using in dark conditions:** When using the flashlight in darkness or difficult conditions (e.g., during hiking, camping), pay special attention to the surroundings to avoid tripping or falling.
- **Storing the flashlight:** When the flashlight is not in use, store it in a dry and cool place to avoid damage, especially if it is powered by batteries that can overheat.
- **Child safety:** The flashlight should be stored out of reach of children, especially if it contains small parts, such as replaceable batteries or removable port covers, which may pose a choking hazard.
- Risk of burns and damage:** Exercise caution with bright light: Do not point the flashlight directly at the eyes, especially at high light power, to avoid eye damage.
- Safety warning regarding contact with hot surfaces:** The external parts of the flashlight may become hot, especially in the case of a high-power LED flashlight. Always check the temperature of the flashlight before reusing it, especially after prolonged use.
- **Exercise caution with bright light:** Do not point the flashlight directly at the eyes, especially at high light power, to avoid eye damage.
- **Safety warning regarding contact with hot surfaces:** The external parts of the flashlight may become hot, especially in the case of a high-power LED flashlight. Always check the temperature of the flashlight before reusing it, especially after prolonged use.
- Maintenance recommendations:** Cleaning and maintenance: Regularly check the condition of the flashlight. Use a soft cloth to clean the casing to avoid scratches and damage. Ensure that there is no moisture in the battery compartment to prevent damage.
- Battery replacement recommendations:** Replace the batteries in the flashlight regularly, according to the manufacturer's instructions. Avoid using damaged or excessively worn batteries, as they may affect the device's performance and pose a risk of overheating.
- **Cleaning and maintenance:** Regularly check the condition of the flashlight. Use a soft cloth to clean the casing to avoid scratches and damage. Ensure that there is no moisture in the battery compartment to prevent damage.
- **Battery replacement recommendations:** Replace the batteries in the flashlight regularly, according to the manufacturer's instructions. Avoid using damaged or excessively worn batteries, as they may affect the device's performance and pose a risk of overheating.
- Storing the flashlight:**

Storing under appropriate conditions: To ensure the flashlight operates correctly for a long time, store it in a dry and cool place, away from extreme temperatures, moisture, and heat sources. Avoid storing the flashlight in places where it may be exposed to direct sunlight or high temperatures. • Storing under appropriate conditions: To ensure the flashlight operates correctly for a long time, store it in a dry and cool place, away from extreme temperatures, moisture, and heat sources. Avoid storing the flashlight in places where it may be exposed to direct sunlight or high temperatures. Safety measures: Before charging, check that the device's contacts are clean. Never leave the device unattended while in use and charging. Ensure that you can quickly disconnect the device from the power source in an emergency. Never expose the device to high temperatures. Charge the device in a dry and well-ventilated area away from flammable materials, maintaining a clearance of at least 1m from other objects. Never cover the device while charging. Never use a power supply, charging station, cables, etc., without the manufacturer's recommendation and certification. Take care of your property; the device is equipped with cells that are difficult to extinguish, equip yourself with a fire blanket.

LI-ION Battery

The device is equipped with a LI ION (lithium-ion) battery, which, due to its physical and chemical structure, ages over time and with use. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal operating conditions for the device exist, and the battery itself is new and fully charged. Actual operating time may differ from the declared time in the offer and this is not a defect of the device but a product feature. To maintain maximum battery life, it is not recommended to discharge it below 3.18V or 15% of total capacity. Lower values, such as 2.5V for the cell, permanently damage it and this is not covered by warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and its charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.

LI-PO Battery

The device is equipped with a LI PO (lithium-polymer) battery, which, due to its physical and chemical structure, ages over time and with use. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal operating conditions for the device exist, and the battery itself is new and fully charged. Actual operating time may differ from the declared time in the offer and this is not a defect of the device but a product feature. To maintain maximum battery life, it is not recommended to discharge it

below 3.5V or 5% of total capacity. Lower values, such as 3.2V for the cell, permanently damage it and this is not covered by warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and its charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.

Environmental Protection

Used electronic equipment marked in accordance with the European Union directive must not be placed together with other municipal waste. It is subject to selective collection and recycling at designated points. By ensuring its proper disposal, you prevent potential negative consequences for the natural environment and human health. The system for collecting used equipment complies with locally applicable environmental protection regulations regarding waste disposal. Detailed information on this topic can be obtained from the municipal office, cleaning company, or the store where the product was purchased. The product meets the requirements of the so-called New Approach directives of the European Union (EU) concerning issues related to user safety, health protection, and environmental protection, specifying hazards that should be detected and eliminated.
