Telesin Charger for DJI Osmo Action 5 Pro

User Manual

Description:

Ensure continuous recording with the Telesin charger designed specifically for owners of the DJI Osmo Action 5 Pro camera. This compact and efficient device allows you to charge three batteries simultaneously, offering fast PD charging and intelligent power management. No matter where you are, you can count on a full charge and readiness to go – the charger provides 100% power whenever you need it.

Specification:

Included

- charger
- charging cable
- user manual

Manufacturer Telesin

Model S0-BCG-34-TDJ

Weight 112 g

Dimensions 132 x 61 x 27 mm

Input Voltage 5V/3A, 9V/2A, 12V/1.5A

Output Voltage 4.45V/3A

Operating Temperature 0°C~40°C

Color Black

Manufacturer

Shenzhen Telesin Digital Co., Ltd

Bantian Street Block B / Room 526

518000 Shenzhen, Guangdong

Using the product for purposes other than intended may cause damage to the product or pose a risk to health or life. Do not expose the product to mechanical loads. If safe operation is not possible, discontinue use. If there are any doubts regarding operation, please contact the Manufacturer or Importer.

Environmental Protection

Used electronic equipment marked in accordance with the European Union directive must not be disposed of together with other municipal waste. It is subject to selective collection and recycling at designated points. By ensuring its proper disposal, you prevent potential negative consequences for the natural environment and human health. The system for collecting used equipment complies with locally applicable environmental protection regulations regarding waste disposal. Detailed information on this can be obtained from the municipal office, cleaning facility, or the store where the product was purchased.

The product meets the requirements of the so-called New Approach directives of the European Union (EU) regarding safety, health protection, and environmental protection, specifying hazards that should be detected and eliminated.

Li-Ion Battery

The device is equipped with a Li-Ion (lithium-ion) battery, which, due to its physical and chemical structure, ages over time and with use. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal working conditions exist for the device, and the battery is new and fully charged. Actual operating time may differ from that declared in the offer and this is not a defect of the device but a characteristic of the product. To maintain maximum battery life, it is not recommended to discharge it

below 3.18 V or 15% of total capacity. Lower values, such as 2.5 V for the cell, permanently damage it and this is not covered by warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and its charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.

LIPO Battery

The device is equipped with a Li-Ion (lithium-ion) battery, which, due to its physical and chemical structure, ages over time and with use. The manufacturer specifies the maximum operating time of the device under laboratory conditions, where optimal working conditions exist for the device, and the battery is new and fully charged. Actual operating time may differ from that declared in the offer and this is not a defect of the device but a characteristic of the product. To maintain maximum cell life, it is not recommended to discharge it below 3.18 V for a single cell or 15% of total capacity. Lower values, such as 2.5 V for the cell, permanently damage it and this is not covered by warranty. If the battery or the entire device is not used for more than one month, the battery should be charged to 50% and its charge level should be checked periodically every two months. Store the battery and device in a dry place, away from sunlight and negative temperatures.

Maintenance

The product must be regularly maintained (cleaned) by the user or through specialized service points at the user's cost and responsibility. In the absence of information regarding necessary maintenance, periodic, or service actions in the user manual, the user should regularly assess, at least once a week, the physical condition of the product compared to a physically new product. If any deviation is detected or identified, urgent maintenance (cleaning) or service steps must be taken. Failure to perform proper maintenance (cleaning) and to respond upon detecting a state of deviation may lead to permanent damage to the product. The manufacturer is not responsible for damages resulting from neglect.

Precautions

- Before starting to charge, check that the device contacts are clean.
- Never leave the device unattended while in use and charging.
- Ensure that you can quickly disconnect the device from the power source in an emergency.
- Never expose the device to high temperatures.
- Charge the device in a dry and well-ventilated area away from flammable materials, maintaining a minimum distance of 1 meter from other objects.

- Never cover the device while charging.
- Never use a power supply, charging station, cables, etc., without the manufacturer's recommendation and certification.
- Take care of your property; the device is equipped with batteries that are difficult to extinguish, so have a fire blanket on hand.
